EDUCATION

BINUS University, Jakarta, Indonesia — Expected 2028
Bachelor's degree, Data Science — Cumulative GPA: 3.58/4.00
Relevant coursework: Machine Learning, Deep Learning, Bayesian Data Analysis, Model Deployment, Data Mining & Visualization, Big Data Infrastructure

DATA SCIENCE PROJECTS

Credit Score Classification: End-to-End MLOps, *Individual project, Model Deployment course* — Jun 2026

- Built a production-style pipeline that cleans messy raw data (numbers stored as text, junk placeholders, impossible ages) and trains scikit-learn models tracked in MLflow, with an F1 approval gate before any model is deployed.
- Deployed it on AWS (training on SageMaker, models in S3, a Streamlit app on EC2); the tuned Random Forest reached macro-F1 0.72 on three imbalanced classes.

Vehicle & License Plate Detection, *Team project, Deep Learning course* — May – Jun 2026

- Wrote the team's code to fine-tune YOLOv8s and YOLOv8n on 13 Indonesian vehicle classes, including angkot, becak and license plates, reaching mAP50 0.81 on a held-out test set.
- Compared both model sizes for deployment (the nano model is 2× faster but misses 9% more vehicles) and exported the final model to ONNX for a live demo that runs in the browser.

Heart Disease Prediction, *Python, scikit-learn*

- Found that 70% of the popular 1,025-row UCI dataset is duplicate rows, which leak into the test set and inflate accuracy to a misleading 100%.
- Rebuilt the evaluation on 302 unique patients and chose Logistic Regression for its recall of 0.85 (ROC-AUC 0.87) and its explainability to clinicians.

Hourly Temperature Forecasting, *PyTorch, LSTM*

- Built a stacked LSTM on 420k weather readings that forecasts next-hour temperature from 72-hour windows, using a chronological split to avoid look-ahead leakage.
- Benchmarked it against naive forecasts and cut the error by 35% compared to persistence (MAE 0.48 °C).

Bayesian House Price Regression, *Team project, Bayesian Data Analysis course* — Jan 2026

- Cleaned the California Housing data (20,640 districts) and wrote the R and JAGS code for MCMC sampling and convergence diagnostics (R-hat ≤ 1.004).
- After the course, found and fixed a prior-scale mistake that had shrunk the income effect about 1,500×, and reported 95% predictive intervals instead of single point estimates.

Bank Telemarketing Analysis, *R, R Markdown, plotly*

- Analysed 8,237 campaign records and found that previously contacted clients subscribe about 6× more often (65–70% vs 11%), then turned the findings into targeting recommendations.

EXPERIENCE

Kam Ma Leather Garments, *Intern*, Hong Kong — Jul – Sep 2025

- Assisted with customer measurements for bespoke leather jackets and handled the finishing stage, including the complimentary cleaning each jacket receives before handover.
- Recorded sales and summarised revenue in Excel, and prepared the sales paperwork for the shop.

Freelance Designer & Tailor, *Self-employed*, Jakarta, Indonesia — 2023 – 2025

- Designed and tailored custom pieces on request for paying clients who found me through word of mouth.
- Handled each order from start to finish: understanding what the client wanted, sourcing materials, pricing the work and delivering it.

Pelita Bengkulu, *Administrative Assistant*, Bengkulu, Indonesia — 2022 – 2024

- Recorded transactions and handled the calculations behind the company's financial paperwork.
- Prepared reports for management and supported day-to-day secretarial and administrative work.

Sebudi Coffee, *Barista*, Alam Sutera, Tangerang — Mar – Jun 2024

- Prepared coffee and served customers in a busy café, keeping orders accurate and moving during peak hours.

SKILLS AND LANGUAGES

Programming: Python, R, SQL
Libraries: scikit-learn, PyTorch, Ultralytics YOLOv8, pandas, NumPy, Matplotlib, dplyr, ggplot2
Tools: MLflow, Streamlit, AWS (S3, EC2, SageMaker), Git, Jupyter, Microsoft Office (Excel, Word, PowerPoint)
Networking: Cisco Packet Tracer (designing network topologies)
Languages: Bahasa Indonesia (native), English (fluent)
